Aesthetic facial enhancements without surgery?

Now you can, and with an option of permanent or temporary solutions!

AlphaHealth, a major distributor in aesthetic products and medical equipment since 2002, introduces Aquamid – a permanent filler and Esthélis – a temporary filler for facial enhancements.

AQUAMID®

Aquamid is a highly-purified hydrogel permanent filler that does not contain solid microparticles. This makes it soft and uniform. Its unique characteristic provides you with a safe, immediate and long-lasting solution to your aesthetic enhancements. Aquamid is injected under the skin where it can't be seen or felt and it remains in place permanently. However, due to the progressive ageing of the skin, follow-up injections are recommended to maintain the desired effects.

Aquamid has been especially designed to last. And formulated for facial enhancements, such as deep facial lines, wrinkle treatment, lips augmentation, cheeks, forehead and chin augmentation.

Aquamid has been used successfully for over 10 years on more than 100,000 patients and all investigations prove that Aquamid is safe, non-toxic and does not induce allergic reactions.

Esthélis is a new generation temporary filling implant made from hyaluronic acid by biofermentation. A product of natural origins, it is safe, biocompatible and resorbable. Regular refilling is required because of its biodegradable structure. Esthélis is used for wrinkles, such as nasal furrows, glabellar wrinkles, laughter lines, lips, chin, cheeks augmentation and other facial depressions due to injury or age-related scarring.

Ask your dermatologist or aesthetic practitioner about Aquamid or Esthélis
